

RYAN TOOHL

ryan@ryantoohil.com

SUMMARY

A well-rounded development manager, architect, and problem solver focused on getting the right solution out the door. Hands-on manager experienced in multi-location (US and offshore) development teams. Able to communicate and work with all functional areas of a company, from finance to marketing, legal to business development.

TECHNICAL SKILLS

Perl, HTML, Ruby, JavaScript, CSS, MySQL, Apache, nginx, Scaling, Full stack development

RELEVANT EXPERIENCE

Endurance International Group (EIG), Burlington, MA

Web services provider to over 3.5 million small businesses. <http://www.enduranceinternational.com>

Senior Director, Engineering

November 2008 – Present

I'm the engineering manager and architect for a 20+ person engineering team (located in multiple US locations, as well as in India). My team supports 40+ web brands, 1.5 million customers, 5+ million domains, and millions of page views per month. In this role, I've worn many hats and had the opportunity to touch almost all aspects of the business. Honestly, I just like solving tough problems.

- Manage the engineering team for a \$130+ million dollar business unit.
- Run the technical hosting acquisitions process, moving hundreds of thousands of customers from other architectures to the EIG architecture.
- Skilled in managing teams in both waterfall and Agile methodologies, across multiple geographies.
- Well-versed in all areas of the business, having worked closely with marketing, support, finance, and other business leaders to design and develop the right tools and processes to help them reach their goals.
- Helped to take EIG public in 2013.

Technical Project Manager

September 2005 – November 2008

As project manager for our engineering team, my role evolved into being a team lead/engineering manager focusing on our hosting acquisitions. I managed the acquisitions (starting with a two person technical team) of multi-million dollar hosting companies, starting with the due diligence process through to the technical migration process.

SiteLock

Website security, malware detection, and vulnerability scanning. <http://www.sitelock.com>

Engineer/Admin

August 2008 – April 2011

One of three original engineers brought on to bootstrap and get the company off the ground, I designed and built portions of the original architecture, and helped to grow SiteLock from zero customers to a profitable business. Left SiteLock to focus full time on my role at EIG, but still do some contract work from time to time.

- Helped to design an architecture that could inexpensively scale to scan hundreds of thousands of websites.
- With only two or three full time technologists, built reliable systems that required little maintenance.
- Designed and implemented the SiteLock API, an XML-based API used both internally (to drive the dashboard) and by partners (for fulfillment).

EDUCATION

Virginia Polytechnic Institute and State University, B.S., Computer Engineering, 1996 – 2000
